The Original Lif-Table™ Kit

Installation Instructions for the Original Lif-Table™

Make sure two small pieces of wood trim are installed horizontally on the dinette base to support the table top in the down position. In the down position, the table top should be flush with the seat benches, and able to accommodate the bench cushions to create a flat bed surface. Or, install four J005 Base Cleat Brackets (not included in kit), to support the table top in the down position.

Place the table upside down on a bench or other working surface with the table end even or slightly extended over the bench edge. Hang the J025 Bent Rod on the table and center.

Place the J003 Table Brackets over the rod and with the lip of the brackets held up against the table, screw in place **(See figure 1.)** In all instances leave enough space between the edge of the brackets and rod bends to minimize binding.

Turn the table over and place on dinette base in the down position with the rod in the up position and against the wall **(See figure 2.)** Mount the J002 Permanent Hinge Brackets on the wall, holding them firmly in position over the rod when mounting **(See figure 3.)** Figure 4 shows the completed mount.

Raise the table to the dining position and place the J001 Wall Mounting Brackets over the exposed ends of the J003 Table Brackets and center. Bring the J001 Wall Mounting Brackets down as far as feasible, if possible, to the top of the table and fasten the two top holes to the wall **(See figure 5.)** Since the bottom holes are normally below the top of the table, it is necessary to drop the table to the down position to complete installation of the J001 Brackets **(See figure 6.)**

Lif-Table™ Standard Kit Parts

Note: Standard composition of the Lif-Table™ Kit has changed in 2022.
